Cayetano Soriano Gallego

AI in production, on platforms that don't break.

CTO and hands-on architect with 15+ years in tech, 8+ on AWS and 7+ as CTO. I've led two monolith-to-microservices transformations, and today I build LLM features, MCP servers and agentic engineering workflows that run in production.

What I build with AI

LLM features in real products

Claude generating bilingual listings and SEO copy for a marketplace; LLM symptom triage in a digital-health product; OpenAI and Gemini for chat and speech-to-text in a voice assistant. Tool calling and structured outputs, not free-form chat.

`Claude API` `OpenAI` `Gemini` `Tool calling` `Speech-to-text`

MCP servers & agent tooling

MCP servers that let agents read and act on product data safely, from a back-office admin server to a 7-module domain server (medication, schedule, calls, timeline…). Internal tools built on the Claude Agent SDK.

`MCP` `Claude Agent SDK` `TypeScript` `Python`

Privacy, tests & cost as defaults

Personal data stripped before any prompt, feature-flag kill switches and switchable EU endpoints for GDPR; LLM calls covered by tests with a fake model transport; the right model per task to keep cost in check; Sentry monitoring like any other service.

`GDPR` `PII redaction` `Feature flags` `Testing` `Sentry`

Agentic engineering for teams

Claude Code across a dozen repos with project rules (CLAUDE.md) enforced in CI, AI agents in CI/CD and automated dependency updates. As CTO, I introduced LLM-assisted workflows into the engineering process.

`Claude Code` `CI/CD` `Dependabot` `Cursor`

Experience

Independent

Apr 2026 — Present

Fractional CTO, Architect & AI Engineer

- **Fractional CTO** and hands-on architect/developer for early-stage companies: technical strategy, architecture reviews, cloud and delivery setup.
- **Enolovers** (client): cut app load time from **~10 s to under 1 s** (resource loading, lazy vs eager data, DB indexes, Redis caching, rate limiting); **Claude-powered** bilingual content generation and an **MCP** admin server; CI/CD with **AI agents**, automated dependency updates and a test harness; security best practices; infrastructure in **Terraform**; Sentry, monitoring, analytics and per-call metrics.
- **Own digital-health product** (in development): LLM symptom triage with personal-data stripping, a voice companion with speech-to-text, and an **MCP server** with 7 tool modules.
- Deep-dive training in **security, AI/LLM systems, software architecture and blockchain**, applied directly to client work.

ShareTech

Mar 2023 — Apr 2026

Chief Technology Officer

- Owned the **technology vision and roadmap**; final say on cloud architecture, build-vs-buy and platform investments.
- Led cross-functional engineering squads; set standards for **microservices governance, reliability and developer experience**.
- Hands-on across **infrastructure automation (Terraform, ECS)**, AWS cost optimization and on-call/observability with Sentry + PagerDuty.
- **Vendor and partner contracts** (M2M and cybersecurity integrations with Telefónica); technical counterpart for Pamplona City Council.
- Operations & logistics tooling: **metrics, SLAs, reporting dashboards** and cost optimization.
- **End-to-end observability**: OpenTelemetry instrumentation, Datadog/New Relic, CloudWatch, Kibana, Sentry and PagerDuty on-call.
- Hands-on backend development; introduced **LLM-assisted workflows** into the engineering process.

Ride On

2019 — Mar 2023

Chief Technology Officer

- **Promoted from Architect to CTO** to own the full technology strategy of the eSharing mobility platform (remote since 2020).
- Scaled the engineering organization and introduced **OKRs** for the tech department.
- Drove **event-driven architecture on AWS Kinesis**; optimized container orchestration on **ECS**, cutting infrastructure cost ~30%.
- Directly accountable for **uptime (99.99%), security and technical due diligence** with investors.
- **Vendor and partner contracts** (M2M and cybersecurity with Telefónica); technical counterpart for city councils in **Miami, Dundee, Leicester and Pamplona**.
- Operations & logistics: internal tooling, metrics, SLAs and reporting dashboards.
- **End-to-end observability**: instrumented every service with **OpenTracing / OpenTelemetry** (distributed tracing), structured metrics and alerting (New Relic, Datadog, CloudWatch, Kibana, Sentry, PagerDuty) — from request to database.

Ride On

2018 — 2019

Software Architect

- Led the complete platform re-architecture: **legacy Clojure monolith → 20+ containerized microservices on AWS ECS**.
- Authored the entire **Infrastructure-as-Code layer in Terraform**; automated CI/CD with Jenkins, images with Ansible + Packer.
- Established observability with Sentry and PagerDuty; removed the bottlenecks blocking **city-wide scale**.

Kimia

2017

Software Architect

- Designed and delivered **high-throughput backend services in Go**, backed by Redis and Elasticsearch.
- Built real-time monitoring and alerting pipelines that improved incident response times and reliability.

Packlink

2015 — 2017

Backend Engineer

- Key contributor to the **Packlink Pro and eBay shipping integration** backend.
- Drove the migration from a PHP monolith to **polyglot microservices (Java, Scala, Python)** with RabbitMQ, Cassandra and Redis.
- **Zero-downtime deployments** across high-traffic e-commerce operations.
- Platform **monitoring and on-call**: Kibana/Elasticsearch dashboards, CloudWatch, Sentry and PagerDuty for a high-availability product.

Skills & technologies

AI, agents & LLMs

Claude / Anthropic API · OpenAI API · Gemini API · MCP (Model Context Protocol) · Claude Agent SDK · AI agents · Tool calling · Structured outputs · Prompt engineering · Speech-to-text (Whisper) · PII redaction / GDPR · Claude Code · Cursor · GitHub Copilot · Blockchain / Smart contracts

Cloud & infrastructure

AWS · Terraform · ECS · Serverless · Kong · Kinesis · SNS / SQS

Backend

Java / Spring Boot · TypeScript / Node.js · Python · Scala · PHP

Data & storage

DynamoDB · Elasticsearch · MongoDB · MySQL · Redis / ElastiCache · Cassandra · Hadoop / Hive

DevOps, CI/CD & observability

Docker · Jenkins · Ansible · Packer · Consul · OpenTelemetry / OpenTracing · Distributed tracing · Datadog · New Relic · CloudWatch · Kibana · Sentry · PagerDuty · RabbitMQ · Security hardening

Leadership

Tech strategy & roadmap · OKRs · Hiring & team scaling · Technical due diligence · Cost management · Security & incident response

Education & certifications

Universidad de Cádiz

Computer Systems Engineering

2007 — 2014
